

CARIBBEAN AG MANAGEMENT NETWORK

Bringing science-based solutions to smallholding producers

About us

Research conducted in the **Caribbean region** to benefit **smallholding producers** are often done in isolation, while the need for information sharing, collaborations and community exchange across the region is critical to the advancement of science and technology. Researchers in the Caribbean region needs a platform to communicate appropriate practical and theoretical application of equipment, techniques and tools that results in better plant and livestock management recommendations. The Caribbean Ag Management Network (CAG Network) was developed to provide researchers, extension educators, agriculture consultants, and students in the Caribbean region with an online source for **science-based** solutions on all aspects of plant and livestock management for smallholding agricultural systems.

Mission

The mission of CAG network is to provide a science-based resource that helps researchers, producers, educators, agricultural consultants and students in the Caribbean region make better plant and livestock management decisions and recommendations. CAG network achieve this mission through publication of an online peer-review journal **Caribbean Agriculture**, facilitating **collaboration** among researchers in the Caribbean region and a wealth of resources for authors, producers, educators and students. CAG network also provides an education center that provides a collection of **educational webcast modules** that is useful for self-training and the exchange of ideas on matters practical and theoretical.

Publications

CAG network will publish fact sheets, monthly magazine, images, videos and a bi-yearly online peer-reviewed journal **Caribbean Agriculture**. The Caribbean Agriculture publishes applied crop and livestock system based research that has practical application for small holding limited resource production systems. It is a multidisciplinary science-based journal covering all aspects of applied crop and livestock management.

Collaborations

CAG network will provide **constant support** to the latest development in Caribbean agriculture in your field of interest through open and straightforward communication. We can connect you to our established influential researchers and authors providing you an unique insight into the core research approach directly from the researcher.
